

Nest

CONCEPT

NEST is a portable lamp designed to show organic elements through its form and texture. This is shown by its organic shape all the way to its clay material. The lamps' rays of light emitted from small holes throughout the clay spheres are similar to the sun shining through tree limbs and leaves in nature. Within the globes, which resemble the moon and its craters, the LED bulbs are nested. The small holes will cast a design onto any surface that surrounds the lamp.
